

PACKAGE SINGULATOR

The MDC Singulator is the most economic solution for converging rollstock packages into a single lane prior to secondary operations.

MDC's converger works with all rollstock FIFIS machines.

Our machine does not use any gates that can catch on the product but instead uses belt speed to control the position of the product.

The laner features

- Quick belt change over
- Simple HMI programs for product changes
- Fits directly over the MD cutting system
- No external conveyor needed
- Small footprint
- Side belt control of product
- SS construction

Technical details

- 120 packs per minute
- Format dimensions (LxWxH): 21"x22"x6"
- Machine dimensions (LxWxH): 58"x32"x34"
- 304 Stainless steel finish
- 2-8 lanes (fixed or user switchable)
- Electric: 200-240V, 60Hz, 4A
- 60PSI, 5l/min

MDC Engineering is a full service package machinery company.
